This publication is really gripping and exciting. It really is basic but unexpected situations in the 50 % in the book. It is extremely difficult to leave it before concluding, once you begin to read the book.

Excerpt: .not conform to type in size, shape, or even color of fruit. If we then wish to assume that our results are due to multiple factors, and that our parents are heterozygous for many size factors, we must at the outset admit that the heterozygosity is permanent in an inbred line. We are then forced to assume another factor for each added multiple factor which keeps that multiple factor inactive. That means we must assume that for each character studied each type is homozyous for a certain size factor whichit exhibits, either homozygous or heterozygous for at least one other size factor which it does not exhibit, and homozygous for an inhibitor factor for each separate additional size factor. We inust further admit that there are no loose, uninhibited additional size factors, so that all the various sized factors and their respective inhibitors happen to be exactly paired in every type. For example, if a type w ith the evident size factor 2o for fruit length carried another size factor 25, either dominant or recessive to 20, that size factor 25 must always be paired with an inhibitor factor for 25, as otherwise the 25 would show in pure line cultures. Likewise we must assume that in the type an inhibited size factor does not influence the size fixed by the single uninhibited size factor. Since that must be true in every type, where in the total a large ntunber of size factors of...
